### Assignment 2 (ELEC 341 L2\_LaplaceTransform)

### Problem 1:

Find the inverse Laplace transform of the following function using tabulated Laplace transform pairs:

$$F_1(s) = 1/(s+3)^2$$

### **Solution:**

we make use of the frequency shift theorem, Item 4 of Table 2, and the Laplace transform of f(t)=tu(t), Item 3 of Table 1. If the inverse transform of  $F(s)=1/s^2$  is tu(t), the inverse transform of  $F(s+a)=1/(s+a)^2$  is  $e^{-at}tu(t)$ . Hence,  $f_1(t)=e^{-3t}tu(t)$ .
